

Luis Lucas Reche

Applied AI Backend Engineer | Go & Agent Systems

Spain | rechedev@hotmail.com | github.com/rechedev9 | luisreche.dev | linkedin.com/in/luisrecheamado

PROFESSIONAL SUMMARY

Applied AI backend engineer building reliable LLM workflows and cloud systems in Go. Production experience spans AI-assisted document processing, cloud data services, correctness-sensitive operations, and internal agent tooling on GCP. Designs bounded multi-agent delivery systems with explicit verification gates and persistent implementation memory.

PROFESSIONAL EXPERIENCE

Go Backend Engineer | [Agentero](#)

April 2026 - Present

US insurance marketplace connecting independent agents with carriers.

- Build and operate Go backend services and AI-assisted workflows spanning RPC APIs, document processing, and data operations.
- Deliver scheduled cloud data services on GCP, applying streaming and parallel execution to improve reliability under production workloads and managing infrastructure with Terraform.
- Modernize correctness-sensitive operations with self-service tooling and golden-master tests that preserve output parity.
- Build internal AI tooling with safeguards for data freshness, naming variation, and schema changes.

Full-Stack Developer (Freelance) | [berrus.app](#)

September 2025 - Present

- Built a Discord webhook notification service and contributed through pull-request review.
- Optimized SQL query paths and connection pooling; building a Windows desktop client with Electron.

SELECTED ENGINEERING PROJECTS

TickCut | github.com/rechedev9/tickcut

- Built a local-first Go pipeline that parses Counter-Strike 2 demos into deterministic highlight plans, orchestrates HLAE/CS2 capture, and renders publish-ready vertical videos with FFmpeg and sandboxed Lua effects.
- Ships a CLI and Electron/Next.js Studio with recovery-aware capture, human approval and QA gates, and versioned Windows installers with SHA-256 checksums.

Gravity Room | github.com/rechedev9/gravity-room

- Built a full-stack strength-training product as a TypeScript monorepo with an Elysia/PostgreSQL API, React web app, Expo mobile app, shared packages, and same-origin deployment on Vercel.

TECHNICAL SKILLS

Languages	Go, TypeScript, JavaScript, SQL
Backend and data	Connect RPC, gRPC, Protobuf, REST, Cloud Spanner, PostgreSQL, BigQuery
Applied AI	LLM document extraction, agent orchestration, MCP, tool design, structured outputs, human-in-the-loop safety
Cloud and infrastructure	GCP, Cloud Run, Pub/Sub, GCS, Terraform, Docker, GitHub Actions
Quality	golden-master testing, Playwright, adversarial review, agent-based QA and resilience review

EDUCATION AND LANGUAGES

Education

Higher Technical Diploma in Web Application Development (DAW), completed in 2025
Harvard CS50 - Introduction to Computer Science
University of Helsinki Java Programming MOOC (2024)
Claude Code in Action - Anthropic (2026)

Languages

Spanish (Native) | Catalan (Native)
English (Advanced)
