Profile

Customers bring the problem. I ship the AI system that solves it and keep it running. Since 2021 I have taken products from a customer's problem to production and kept them running after launch, across LLM features, web, mobile, desktop, backend and infrastructure. Coding agents such as Claude Code and Codex do most of the typing; I design the system, review every change and own what ships. Two of them are my own products: ClipHub, a desktop app with 100+ users and 130+ releases, and Gravity Room, a strength training app for web and mobile.

Professional Experience

Applied AI Software Engineer, Agentero Apr 2026 - Ongoing
Remote

- Built, end to end, an internal app that uses an LLM to partly automate month-end commission payments, a critical process for a US network of independent insurance agents.
- Maintained and extended the marketplace where those agents reach insurance carriers, across the Go backend on Google Cloud and the Next.js interface.

Freelance Applied AI Engineer, SocialPro 2025 - Ongoing
Spain

- Built and launched socialpro.es and did its SEO. Monthly Google impressions went from 155 to 18,700 and clicks from 16 to 285 between April and September 2026.
- Built the brand portal and the first CRM of this gaming and esports agency, as its whole product team.
- Built the agency's internal agent platform on top of the CRM: agents work from CRM data under per-run budgets and risk-based policies, redact what they store and wait for a person's approval before any action with external effects.
- Delivered the complete website of Pirotecnia Elche, a fireworks shop and client of the agency, from design to deployment.

Freelance Applied AI Engineer, RecheDev 2021 - Ongoing
Palma, Spain

- Took my own and client products from the first conversation to production as a one-person product practice.
- Created ClipHub, my own Windows app that turns a Counter-Strike 2 demo into an edited video. It has 100+ users after 130+ releases, and I share it with SocialPro.
- Created Gravity Room, my own free and open source strength training app for web and mobile.
- Tuned PCs for competitive players to lower latency, overclocked their hardware and built custom machines.

Pharmacist, Farmacia Portals 10 years

- Decided which products to bring in and when, and how to sell them to different customer profiles.
- Managed the database behind multi-warehouse stock and planned purchasing from stock and sales statistics.

Projects

ClipHub Own product
Windows desktop

- Replaced manual recording and editing with one flow: the player loads a Counter-Strike 2 demo and gets an edited video of their best plays.
- Shipped 130+ releases to 100+ users through in-app updates. The app also clips streams and follows FACEIT players.
- Ran the whole pipeline on the player's PC, so making a video uploads nothing.

Gravity Room Own product
Web and mobile

- Built a free, open source app with 18 strength programs that calculates the weights, sets and reps of every session.
- Wrote one progression engine for web and mobile that raises the load after a completed session and adjusts the plan after a failed one.
- Added a guest mode, Spanish and English, no ads and data export.

Piroboom Client
Pirotecnia Elche

- Built the complete website of a fireworks shop in Elche, from the design and the content to the server it runs on.
- Designed the site around store visits and enquiries for weddings, gender reveals and other celebrations, because fireworks cannot be shipped in Spain.
- Replaced an 82 MB PDF catalogue with a 16-page online reader that has search and zoom, so customers read it without downloading anything.

Open source Merged PRs

- Fixes merged in the official Model Context Protocol TypeScript SDK (#1660, #1653, #1652) and in advancedfx, the Counter-Strike 2 recording tool (#1194).

Honey Encryption Proxy Developer tool

- Built a local proxy for Claude Code that swaps proprietary names in a prompt's code for stand-ins and restores them in the reply.

riskforge Portfolio

- Built an insurance quote gateway that asks several carriers for a price in parallel, as a study project to learn the domain.

Education

Higher Technical Diploma in Web Application Development (DAW) 2024 - 2026

Claude Code in Action, Anthropic 2026

CS50: Introduction to Computer Science, Harvard 2024

Java Programming MOOC, University of Helsinki 2024

Degree in Pharmacy 2016

Skills

Product scoping, UX and interface design, SEO, Release management, LLM agents with tool use, human approval gates, prompt injection defence, cost budgets, MCP servers, Claude Code, Codex, Multi-agent workflows, Review of agent output, Go, Bun, Elysia, PostgreSQL, Drizzle, SQLite, TypeScript, React, Next.js, TanStack, Astro, Tailwind CSS, Expo, React Native, Electron, Rust (UniFFI), Docker, GCP, Terraform, Vercel, GitHub Actions.

Languages

Spanish (native), Catalan (native), English (advanced).
